M&A Attractiveness Index 2017

M&A Research Centre – MARC

February 2018

MARC – Mergers & Acquisitions Research Centre

MARC is the Mergers and Acquisitions Research Centre at Cass Business School, City, University of London – the first research centre at a major business school to pursue focussed leading-edge research into the global mergers and acquisitions industry.

MARC blends the expertise of M&A accountants, bankers, lawyers, consultants and other key market participants with the academic excellence of Cass to provide fresh insights into the world of deal-making.

Corporations, regulators, professional services firms, exchanges and universities use MARC for swift access to research and practical ideas. From deal origination to closing, from financing to integration, from the hottest emerging markets to the board rooms of the biggest corporations, MARC researches the wide spectrum of mergers, acquisitions and corporate restructurings.

The contents and views set out in this publication reflect the views of the authors at the M&A Research Centre and are not necessarily the views of the sponsors of the Centre, and, moreover, should be seen in the context of the time they were made. The M&A Research Centre would like to express grateful thanks to its sponsors.

Overview

Following the financial crisis since 2009, on average 38% of annual M&A activity has taken place in 'non-traditional' M&A markets, i.e. excluding North America, Western Europe, Australia, New Zealand and Japan (*Exhibit 1*), 2017 was also at 38%. This steady level of activity follows an increasing proportion of global gross domestic product (GDP) for these 'non-traditional' markets in the same period, currently 64% according to the IMF's 'World Economic Outlook Database'. The development of more robust rules and regulations, despite the unstable politics around the world and economic instability in the developed markets, has encouraged the rapid growth of domestic and inter-regional M&A activity in many countries within these markets, along with cross-border deals between developed and emerging countries.

Now in its eighth year, the MARC M&A Attractiveness Index Score (MAAIS) provides an update based on 2017 data and analysis, ranking a total of 146 countries worldwide. The Index provides for each country a percentage figure which indicates its attractiveness for domestic and in-bound M&A purposes, i.e., its ability to attract and sustain business activity. The proprietary methodology

for ranking and assessing a country's attractiveness for M&A activity has been developed and reviewed by both practitioners and academics at the M&A Research Centre at Cass Business School.

The primary component of the Index comprises five categories of country development factors. The indicators which make up these factor groups have been discussed by a number of market practitioners and tested against historical market information, as described in the Sample and Methodology section at the end of this report. Twenty-three country development indicators have been aggregated into the following five factor groups:

- Regulatory and Political indicators (e.g., rule of law, political stability and control of corruption)
- Economic and Financial indicators (e.g., GDP size and growth, inflation, stock market capitalisation and access to financing)
- Technological indicators (e.g., innovation and level of high-tech exports)
- Socio-economic indicators (demographics)
- Infrastructure and Assets indicators (e.g., road and rail networks and number of registered companies).

Exhibit 1: M&A activity involving targets from non-traditional M&A markets.

Exhibit 1 shows the M&A activity (the proportion of announced global minority and majority transactions) involving targets from non-traditional M&A markets plotted against those countries' proportion of global GDP (an average five-year forward estimate). Note that the data labels refer to the proportion of global announced M&A volume. For the purpose of this graph, 'non-traditional' M&A markets are defined as all countries excluding those in the 'traditional' M&A markets, namely North America, Western Europe, Australia, New Zealand and Japan.

Source: SDC Platinum (M&A data) and the IMF's 'World Economic Outlook Database' (GDP data)

2017 League Table: Top 10 Focus

Exhibits 2(A), (B) and (C) provide the ranking of 146 countries worldwide which have been analysed using the MARC M&A Attractiveness Index for 2017. They are organised thus: 1-50 [2(A)], 51-100 [2(B)] and 101-147 [2(C)]. The exhibits present the changes in the rankings year-on-year and over a five-year period. Therefore, the direct comparison is with 2016 and 2012, providing both a trend and a current snapshot of the drivers contributing to positive or negative movements from an in-bound and domestic M&A perspective. The 'Market Opportunities' and 'Market Challenges' columns give the factor group range for each country, with the highest ranking factor group being presented as the country's most attractive feature or opportunity, whereas the lowest is the major challenge on a relative basis. Looking at the top ten countries and the regions they represent (*Exhibit 2(A)*), two North American countries form part of the top ten of the MAAIS with the US leading the index and Canada in seventh position. Four European countries are in the top ten together with three Asian countries

completing the final places in the top of the MAAIS list. The Netherlands is leading the European region ranked third in the global country list followed by the UK, Germany and Spain in fourth, fifth and ninth positions respectively. For Asian countries, Singapore leads the region in second position of the global index followed by Malaysia and Hong Kong. The highest factor group ranking for the US, Germany, Canada, and Spain, is 'Infrastructure and Assets'. They all have high levels of good infrastructure such as registered companies, ports, rails and roads. The leading market opportunity for the Netherlands, UK and Malaysia is 'Technology', while 'Regulatory and Political' is the key factor group which kept Singapore, Australia and Hong Kong high in the global ranking.

Notably, the two leading market challenges for almost 80% of all of the top ten countries are 'Socio-economic' – to widely varying degrees, due to ageing and lower-growth populations and 'Economic and Financial' due to low GDP growth.

Movers and Shakers

As noted above, the 2017 Index also shows year-on-year and five-year movements for each country in the ranking. Interestingly, in the top ten of the index, there are no movements for the US, Singapore and Germany. Both the Netherlands and, UK swap ranking while Spain gained six places and is not in the top 10 of the ranking year-on-year. Spain and Malaysia gained nine and eight rankings over the last five years respectively.

The largest movements would be expected to be further down the tables. Within the top 50, the greatest improvement over the past year is Lithuania (28 places) followed by Hungary (19), Turkey (10) and Morocco (10). 'Regulatory and Political' is the greatest strength for Lithuania, while 'Infrastructure and Assets' is the main

strength for both Hungary and Turkey. Slovakia (-23), Brazil (-11) and the Czech Republic (-9) suffered major drops in the top 50 of the global ranking. In the case of Hungary and Brazil, the drop was due to their 'Regulatory and Political' factor group while the 'Economic and Financial' factor was the main challenge for the Czech Republic.

Improvements over the five-year period show Greece leading the pack with a gain of 27 places followed by Saudi Arabia (14), Latvia (13), Oman (12), and Switzerland (11) and Iceland (22). The countries that have lost the most ground in the top 50 over the five year period are: Czech Republic (-14), Slovakia (-13), Brazil (-11), Thailand (-8), and Malta (-7).

146	Mauritania	19%	-3	-3	Regulatory & Political	34%	Infrastructure & Assets	15%

Exhibit 2(C) shows the MARC M&A Attractiveness Index 2017 ('Index Score' column) for the countries ranked between 101 and 146. The exhibit also provides the year-on-year and five-year changes in ranking for each country ('Rank 1YR' and 'Rank 5YR' columns). It also gives the range of factor group scores, with the highest ranked factor group and its corresponding score shown in the 'Market Opportunities' column and the lowest ranked factor group and its corresponding score shown in the 'Market Challenges' column.

Regional M&A Attractiveness

Exhibit 3 provides the regional rankings for the *MARC M&A Attractiveness Index* for 2017. The 'Market Opportunities' and 'Market Challenges' columns give the factor group range for each region, with the highest ranking factor group presented as the region's most attractive feature or opportunity, whereas the lowest ranked factor group is shown as the major challenge which each region faces.

Unsurprisingly, the ranking correlates strongly with business maturity.

North America (1st) and Western Europe (2nd) are the highest ranked regions in terms of M&A attractiveness followed by Asia (3rd) and Oceania (4th). The less mature regions are CEE/CIS (5th), followed by Latin America (6th) and the Middle East (7th) and the last being Africa with the lowest index score of 48%, 37 percentage points below the score of North America. It is worth noting that Asia and Oceania have swapped places over the period of five years.

Exhibit 3: Regional MARC M&A Attractiveness Index Score

Rank		Index score	Index score (Y-Y)	Index score (Y-5)	Market Opportunities	Market Challenges
1	North America	85%	0	0	Infrastructure & Assets 94%	Economic & Financial 76%
2	Western Europe	75%	0	0	Infrastructure & Assets 87%	Socio-economic 63%
3	Asia	75%	0	1	Infrastructure & Assets 91%	Regulatory & Political 51%
4	Oceania	74%	0	-1	Regulatory & Political 88%	Socio-economic 63%
5	CEE / CIS	68%	0	0	Socio-Economic 80%	Economic & Financial 47%
6	Latin America	63%	0	0	Infrastructure & Assets 77%	Regulatory & Political 45%
7	Middle East	61%	0	0	Socio-Economic 69%	Technology 53%
8	Africa	48%	0	0	Infrastructure & Assets 57%	Regulatory & Political 39%

Exhibit 4 shows the five factor groups across the eight regions for 2017. 'Technological', 'Regulatory and Political', and 'Infrastructure and Assets' create the most differentiation for North America as the strongest of all regions.

Exhibit 4: Regional Performance by Factor Group (2017)

Sample and Methodology

The Index is designed to evaluate the capacity of a given country to attract and sustain M&A activity. It is a weighted average composite of twenty-three indicators that aggregate into five factor groups: Regulatory and Political, Economic and Financial, Technological, Socio-economic, and Infrastructure and Assets (**Exhibit 5**).¹ In order to reach the final score for each country, we apportion a 75% weight to the index with the remaining 25% weighting provided by that year's domestic and in-bound cross-border M&A activity. The full Index includes the ratings for 147 countries.

Index data

As discussed by a number of authors (Appadu *et al.*, 2017²; Carapeto *et al.*, 2010, 2011³), there are macroeconomic, microeconomic, institutional and socio-economic developments which a country must undergo in order to become an established M&A market. The macroeconomic issues include a country's growth, fiscal policy and government spending on industrial development such as R&D and infrastructure. Tightly controlled economies are more likely to be slow to adapt to changes in market conditions and innovation. The microeconomic issues which affect M&A attractiveness include the structure of a country's industry (i.e., its breadth, maturity and prosperity) and the level of maturity of its financial market (i.e., the stability of its debt yields and size of its risk premia). Institutional developments, such as the sophistication of the banking system and development of the stock market, are pivotal to securing finance for deals. The soundness and reliability of the judiciary system in the local country diminishes the risk of expropriation of wealth, another important consideration for foreign investors. Key socio-economic issues which affect a country's attractiveness and the long-term sustainability of business investment include the size and demographics of the population.

An ageing population, for example, will have a significant effect on future domestic consumer spending, in terms of both volume and habits. The sources of the indicator data shown in **Exhibit 5** are all publicly available, which ensures the ability to update the index annually. For each indicator, a recognised survey, report or database was identified and percentiles were calculated based on the full sample of the particular dataset. Percentiles are used as, for many of the indicators, the potential scale is indefinable and the distribution of countries is not even or normal. Consequently, the calculation of percentiles has been made depending on distributions rather than the full (potential) scale.

Deal data

The M&A data used in this report is sourced from the SDC Platinum database and has been restricted to include only deals in which there has been a change in ownership (controlling or non-controlling stakes) from one firm to another, i.e., excluding spin-offs, recapitalisations, self-tenders, exchange offers, repurchases or privatisations.

Restriction of indicators

The Index aims to cover all of the areas of a country's development which are relevant for M&A attractiveness purposes. Some indicators of importance, such as the development of the domestic bond market or level of education, have not been included due to issues of data availability. There will inevitably be other relevant indicators which have not been included, especially considering the global coverage of information and differences between geographical regions and other micro factors. However, the Index does provide a robust illustration of M&A attractiveness at a country level and can inform decision-making around deal-making in lesser-known markets.

¹ We also restrict the number of countries by only including countries with M&A data (change of control/majority).

Cass Business School

In 2002, City University's Business School was renamed Sir John Cass Business School following a generous donation towards the development of its new building in Bunhill Row. The School's name is usually abbreviated to Cass Business School.

Sir John Cass's Foundation

Sir John Cass's Foundation has supported education in London since the 18th century and takes its name from its founder, Sir John Cass, who established a school in Aldgate in 1710. Born in the City of London in 1661, Sir John served as an MP for the City and was knighted in 1713.
