Equity impact of community-based health insurance

(2004-2008)

Divya Parmar, Manuela de Allegri, <u>Aurélia Souares</u>, Germain Savadogo, Rainer Sauerborn

Equity in health financing

- Equity is an ethical principle
- Health care should be:
 - 1. financed according to *ability-to-pay*
 - Horizontal Equity: those who have the same ability-to-pay should pay the same
 - Vertical Equity: those with greater ability-to-pay should pay more
 - 2. accessed according to need

Reference: Culyer (1995)

The study

Data source: Household panel survey 2004-2008 (n=4695 individuals)

Equity focus:

- SES (poor vs. non-poor):
 - Asset-based SES index was created by Principal Components Analysis (PCA). Data on ownership of household assets (durable goods and livestock) and housing conditions were used. Quartile 1 (Q1) was considered as 'poor'.
- Gender (women vs. men)
- Age (children vs. adults)

Equity at 2 levels:

- 1. Equity in enrolment: Are the vulnerable groups enrolling into CBHI?
- 2. Equity in utilization: Are the vulnerable groups utilizing healthcare?

CBHI design & equity

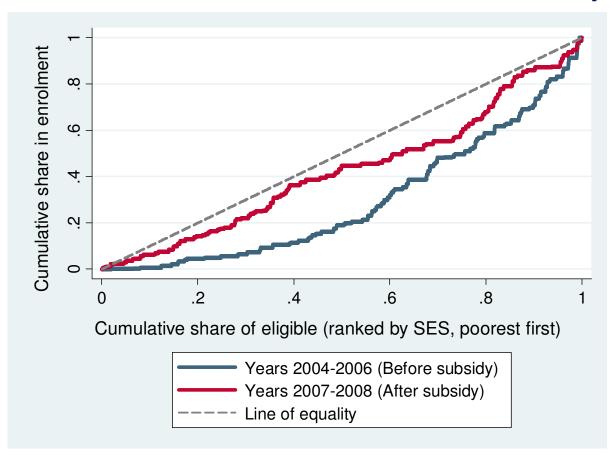

- Poor: Premium subsidies for poor (Q1) households in every village, since 2007
- Women: No specific benefits.
 - Deliveries not covered by CBHI
 - Government: ANC free and since 2007, 80% subsidy on deliveries at public facilities
- Children: Premium subsidies, since the beginning (2004)
 - Government: Essential immunizations, malaria treatment & consultations

Equity in enrolment

			<u>_</u>
Variable	OR	SE	
Male	0.886	0.187	– No gender effect
Child	0.456	0.132***	- Children less likely to enroll
Poor	0.274	 Poor less likely to enroll 	
Near	0.985	0.197	
Household Size	1.027	0.011**	
Ethnicity_Bwaba	0.961	0.235	
Literate	1.974	0.403***	
Year2005	1.792	0.436**	Dependent variable: CHI (0,1) *** p<0.01, ** p<0.05, * p<0.1 Only those individuals who were offered CBHI were included
Year2006	0.890	0.216	
Year2007	2.775	0.644***	
Year2008	1.524	0.366*	
			n=4695)

Equity in enrolment: *impact of subsidies*

Concentration curves: Before & after subsidy

Equity improved

Poor enrolling more after subsidy

Equity in utilization

Variable	OR	SE
Male	0.876	0.130
Child	0.565	0.175*
Poor	0.499	0.115***
СНІ	2.182	0.531***
Near	1.454	0.212**
Household Size	1.016	0.009*
Ethnicity_Bwaba	1.155	0.183
Literate	1.545	0.230***
Year2005	1.904	0.231
Year2006	0.723	0.181
Year2007	0.826	0.212
Year2008	0.733	0.185

- No gender effect
- Children less likely to utilize
- Poor less likely to utilize

Dependent variable: Facility care (0,1)
*** p<0.01, ** p<0.05, * p<0.1

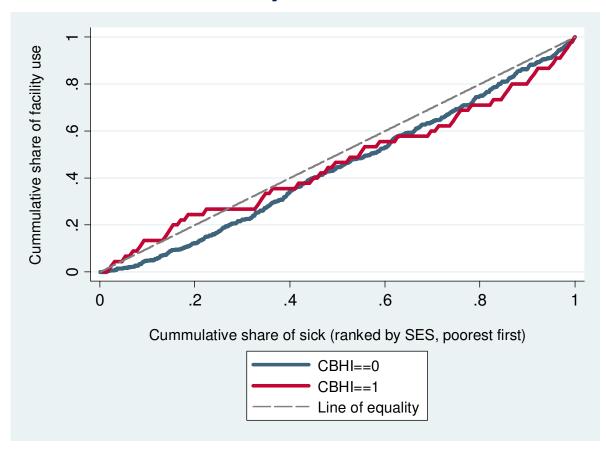

Only those individuals who reported being sick in the previous month at the time of the survey were included (n=1710)

Equity in utilization

Variable	OR	SE	
Male	0.876	0.130	– No gender effect
Child	0.565	0.175*	 Children less likely to utilize
Poor	0.499	0.115***	– Poor less likely to utilize
СНІ	2.182	0.531***	
Near	1.454	0.212**	
Household Size	1.016	0.009*	But, are enrolled poor
Ethnicity_Bwaba	1.155	0.183	women and children
Literate	1.545	0.230***	utilizing care more than
Year2005	1.904	0.231	the non-enrolled?
Year2006	0.723	0.181	
Year2007	0.826	0.212	
Year2008	0.733	0.185	

Equity in utilization: SES

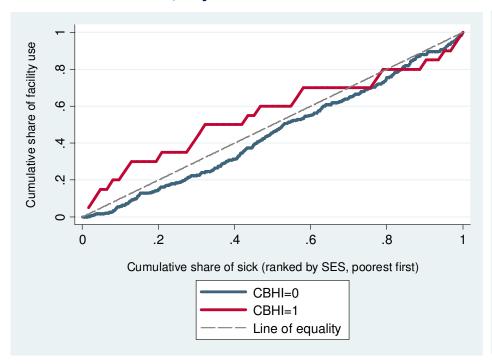

Utilization by enrolment status

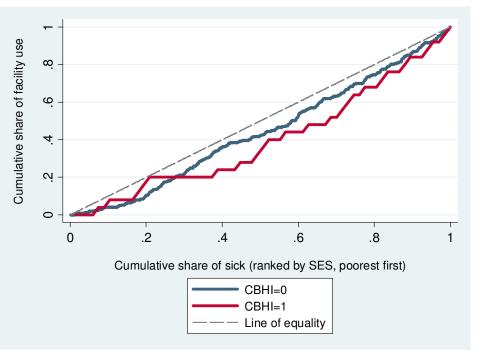

Utilization slightly more among poor who enrolled (CC above line of equality for poorest)

Equity in utilization: gender

Women, by enrolment status

Men, by enrolment status

Among women: utilization more among poor women who enrolled (CC above line of equality)

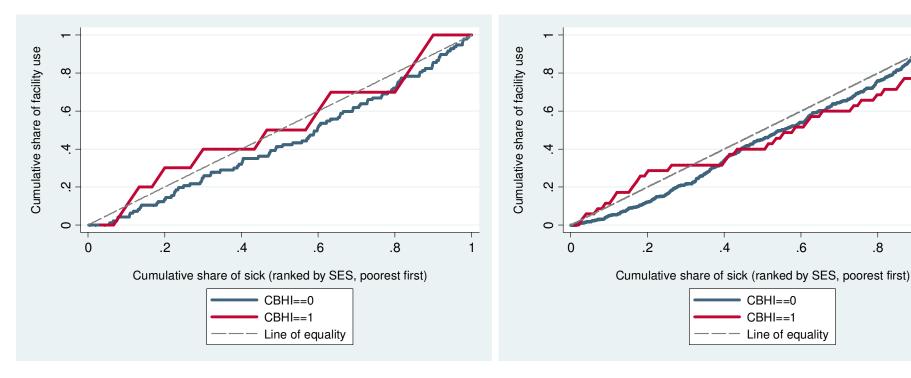

Among men: no difference in utilization for poor (For non-poor, utilization slightly less for enrolled)

Equity in utilization: age

Children, by enrolment status

Adults, by enrolment status

.8

Among children: utilization more among poor children who enrolled (CC above line of equality)

Among adults: utilization more among poor adults who enrolled (CC above line of equality for poor)

Results

1. Equity in enrolment

- Poor: enrolment increased after subsidy (still pro-rich)
- Children less likely to enroll
- No gender effect

2. Equity in utilization

- Poor: slight increase in utilization for those that enrolled
- Women: pro-poor effect for those that enrolled
- Children: pro-poor effect for those that enrolled

Note: Shows the status with and without CBHI; but does not mean that CBHI caused changes in utilization

Implications for National Health Insurance

- Poor: Premium subsidy essential but not enough
 - Less likely to enroll. Even after enrolling less likely to utilize care
 - Other costs, health awareness, behavior at health facilities, sensitization....
- Children: Premium subsidy essential but not enough
 - Less likely to enroll. However, once enrolled utilize care
 - Continue free/subsidized services for children at health facilities
 - Sensitization to increase enrolment
- Women: Premium subsidies not essential
 - Continue free/subsidized maternal care at health facilities
