## A Team Building Project Enhancing Quality Care Indicators.

### Abstract

**Purpose:** The purpose of this paper is to illustrate the development and delivery of a project aimed to facilitate team building and leadership and management skills in a London Paediatric Unit. The project content was tailored to meet the developmental needs of the staff working within the units, incorporating both soft and hard leadership teaching approaches.

**Design/Methodology/Approach:** This paper describes how the project was designed, developed, implemented and evaluated. Beginning with the needs identified by the Unit managers and the identified needs of the staff members, the self awareness person centred approach was used instilling individual responsibility for growth and development.

**Findings:** All staff participated and found themselves to have significantly developed both as individuals and team. They also identified the support required from management in order to fulfill their potential and to work effectively as a team. The teams have since completion of the project been more cohesive and are working more effectively.

**Practical Implications:** The Team Building project demonstrated how externally developed team building projects can be an effective approach to team building and leadership skill set acquisition, which can then be utilized in the practice arena.

**Originality/value:** Utilisation of a person centred approach to team building enables the individual to develop both as an individual and as a team - allowing them to contribute at a higher level.

**Keywords:** Leadership, Management, Quality, Communications, Health Service Sector, Paediatrics.

**Article classification:** Case study

## Overview of paper

A project was undertaken for a London NHS Trust to support staff on a paediatric ward with team building and leadership skills. The Trust requested a project to develop a team of staff on a particular unit, in order to enhance team building and cohesion. The broad scope of the project was - team building to enhance quality indicators.

A number of new staff had recently joined the team and the ward manager had identified some personality differences within the team. The practice environment had been previously divided into two areas and the teams had been rostered separately. However just before the project commenced the rota was changed so the entire team could work across the whole ward rather than in two separate teams. This was to enable staff to work in all the unit areas, such as acute care, high dependency unit, day care or oncology and to work as one whole team.

## Planning phase

During the planning phase the facilitators explored how awareness of management and leadership skills could be incorporated and how they could be embedded to improve actual practice delivery in the clinical setting. The aim was to identify ways in which the skills of the individuals

1  
2  
3 within the team could result in much greater team coherence. It would  
4  
5 also facilitate opportunities for team members to consider specific areas,  
6  
7 commensurate with their responsibilities that **they** wanted to personally  
8  
9 develop within the setting and for their own personal development. It  
10  
11 was envisaged that the project would increase the quality of care  
12  
13 delivered and hence have a positive impact upon practice. The funding  
14  
15 allowed for a four-day project to be delivered by two facilitators for two  
16  
17 separate groups to ensure the unit was sufficiently staffed.  
18  
19  
20  
21  
22  
23  
24

25  
26  
27 The project was developed and facilitated by the authors. Michelle Ellis  
28  
29 has expertise in Practice Development and has managed teams both in  
30  
31 practice and in the higher education setting. Billie Kell has expertise in  
32  
33 the development and delivery of leadership programmes. Jointly, a four  
34  
35 day training package was produced following discussions on the most  
36  
37 appropriate content and modes of delivery. A key aim was for  
38  
39 participants to recognise the links between:  
40  
41  
42  
43  
44  
45  
46  
47  
48

- 49 **1. Leadership styles**
- 50
- 51 **2. Team working**
- 52
- 53 **3. Quality**
- 54
- 55 **4. Practice Development**
- 56  
57  
58  
59  
60

1  
2  
3 The discussion of the content planned and rationale for inclusion led to  
4  
5 the recognition that the content planned fell into two themes: hard and  
6  
7 soft leadership theory (table 1).  
8  
9

10  
11  
12  
13  
14 *Please place table 1 here*  
15  
16  
17

18  
19 The Trust was clear on their expectations, and the facilitators had no  
20  
21 constraints placed on them in terms of content or methods of delivery.  
22  
23 It was vital however, to instigate the team to bond, and appreciate both  
24  
25 their individual and team responsibilities, which contributed to the  
26  
27 effective running of the unit and enhanced the quality of care given to  
28  
29 patients.  
30  
31  
32  
33  
34  
35  
36  
37

38 Discussion of the content and acknowledgment of the morale of the staff  
39  
40 on the unit required a delicate approach to the training package. For this  
41  
42 reason the decision was made to make the focus of the training, personal  
43  
44 self development of the individual. By learning about themselves and  
45  
46 becoming more self aware the training could be personalized to the staff  
47  
48 members.

## Content

### *Introduction*

The first session commenced with an icebreaker which allowed the group to introduce themselves to each other. This was particularly useful for the new members of the team to get to know each other in a "non threatening way" (Phillips, 1994). In line with the goals of the project the ice breaker 'Marooned' was used. The question was posed 'If you were marooned on a deserted island which 3 people would you want with you? They can be dead, alive or imaginary'. This enabled the group to start exploring what they valued in someone in a given situation. It related to Maslow's (1999) hierarchy of needs. Group members identified people who would help them meet the basic needs and Maslow was a theory that as health professionals they already understood.

The groups were then given an individual resource to complete using Pandora's Box to ascertain their views of why they were attending the project. Each of their comments were addressed, as in the main they were negative; particularly as attendance was mandatory. Overall there was strong recognition that team morale was low and consequently the team was not working as effectively as they could have been. A major concern raised by some attendees was that management had not included

1  
2  
3 themselves in the project, and they were also part of the team. The  
4  
5 opportunity was taken to elaborate to the group the facilitators  
6  
7 understanding of the purpose of the project, and why they felt they were  
8  
9 attending the training. Focus was placed on individual personal  
10  
11 development, and how learning about themselves would aid their  
12  
13 development both personally and professionally. It was highlighted to the  
14  
15 group that **our** aim was to get them to learn about themselves and to  
16  
17 initially explore methods and skills that would enhance their ability to  
18  
19 develop. The approach taken personalized the learning experience and  
20  
21 content: for them to explore what makes **them** happy? What motivates  
22  
23 **them?** What type of communicators are **they?**

24  
25

30  
31  
32  
33  
34  
35 Self awareness is a fundamental aspect of every successful individual  
36  
37 (Burnard 1992) although definitions of success obviously vary. Reflecting  
38  
39 on oneself is challenging and there is a requirement to acknowledge that  
40  
41 we may not always like what we see (Schon 1995). Hence self-awareness  
42  
43 requires individuals to be brave and honest in order to develop. To  
44  
45 facilitate this process a reflective journal was utilised. Each day's  
46  
47 training would encompass an additional insert to the reflective journal.  
48  
49 The purpose of the journal was explained as the tool for them to explore  
50  
51 issues as they arose. The journal was **theirs** to use for their personal  
52

2  
3 development. They could add any resources they found useful and record  
4  
5  
6 what they learnt and their reflections on the theory and how they applied  
7  
8  
9 and related it to themselves. Although this was mandatory training it  
10  
11 would not include a formal assessment. To illustrate how they had  
12  
13 developed and to contribute to the team learning however they would be  
14  
15 expected to produce a resource pack focusing upon the specialist topic  
16  
17 they were responsible for on their unit, or an area of interest. This  
18  
19 resource pack would then be presented to their peers on the final day of  
20  
21 the project, and be made available for future use on the unit by the team.

### 30 *Motivation.*

31  
32 The scene was set to focus on the personal development of the group  
33  
34 members and this commenced by exploring the concept of motivation with  
35  
36 the group. It was important to understand the significance of their  
37  
38 definitions of motivation. A word cloud on motivation was shown to  
39  
40 illustrate a diverse array of words that may be associated with  
41  
42 motivation. Once the concept had been understood individually, types of  
43  
44 motivation were explored. The first motivation for a human being is the  
45  
46 motivation for survival - the need to stay alive; which forces us to satisfy  
47  
48 our basic needs such as food, water and air. Visual examples were given  
49  
50 using the trailer of the film 127 hours (You Tube 2010) to illustrate the  
51  
52  
53  
54  
55  
56  
57  
58  
59  
60

1  
2  
3 human need for survival. 127 Hours is the true story of mountain climber  
4  
5 Aron Ralston's remarkable adventure to save himself after a fallen  
6  
7 boulder crashes on his arm and traps him in an isolated canyon in Utah.  
8  
9  
10  
11 Over the next five days Ralston examines his life and survives the  
12  
13 elements to finally discover he has the courage and the wherewithal to  
14  
15 extricate himself by any means necessary, scale a 65 foot wall and hike  
16  
17 over eight miles before he can be rescued (Fox Searchlight 2010).  
18  
19  
20  
21  
22  
23

24 Participants were then given a scenario of feeling unwell and being at  
25  
26 home, and yet if their house was broken into the need for survival would  
27  
28 take over. Next external motivation was discussed with the group. A  
29  
30 definition was given of this being the type of motivation we get from  
31  
32 outside resources such as, parents, friends, managers and teachers,  
33  
34 inspiring individuals and websites. The group were asked about who their  
35  
36 external motivators were, which they shared with the group. The  
37  
38 limitations with external motivators are that they do not last forever,  
39  
40 and are not always present, which was acknowledged by the group. Hence  
41  
42 the most powerful form of motivation is internal motivation; the kind that  
43  
44 makes sportsmen excel for example. The group had to explore other  
45  
46 examples of internally motivated individuals. This linked to the desire  
47  
48 the group expressed about wanting to do their job to the best of their  
49

ability. According to Stephen Covey "Motivation is a fire from within. If someone else tries to light that fire under you, chances are it will burn very briefly". (Thinkexist.com) A video clip was then shown of Stephen Covey presenting The 7 habits of highly effective people (Mind Perk 2011). It was important for the group to explore exactly what motivates them personally. This was instigated by using the quote "Dream as if you'll live forever.... Live as if you'll die today". This stimulated some debate and led to exploring those people who motivate them and why. These were shared with the groups and ranged from parents, friends and co-workers.

Some members of the group believed they were not functioning effectively as a group and this somewhat resulted in a lack of confidence in their own competencies. To develop and build their confidence Maslow's hierarchy of needs (1999) was utilised. This is a core component of nursing education programmes and hence a model most of the group were aware of. Relating motivation to Maslow's hierarchy enabled them to appreciate what they already knew and make links to their previous knowledge and current discussion upon motivation. To aid the group to understand their own motivation at a deeper level McClellan's motivation needs theory (McClelland 1967) was used to help each of the participants

1  
2  
3 to identify which type of motivation best described them: achievement,  
4  
5 authority/power, or affiliation. The purpose of the exercise was to raise  
6  
7 self awareness as this is a key contributor to the successful individual  
8  
9 and to reiterate to the group that the learning was personal development  
10  
11  
12 for them.  
13  
14  
15  
16  
17

### 18 19 *Communication.*

20  
21 To do anything effectively in life there is a fundamental requirement to  
22  
23 be able to communicate (Sully and Dallas 2010). Communication was hence  
24  
25 next explored with the group; particularly miscommunication either via  
26  
27 being lost in translation or where jargon is used. Reasons for  
28  
29 communicating were explored with the group and they were asked why we  
30  
31 communicate - such as forming relationships, and how we make sense of  
32  
33 the world and our experiences. This led to a discussion on the role of  
34  
35 good communication in improving patient outcomes and satisfaction. The  
36  
37 groups were asked who they communicate with on the unit other than  
38  
39 their patients (table 2).  
40

56  
57  
58  
59  
60

*Please place table 2 here*

1  
2  
3 The significance of effective communication was discussed with the group  
4  
5  
6 by posing questions:

- 7
- 8 • What happens when you speak to someone whilst having to
- 9 concentrate on doing something else?
- 10
- 11
- 12
- 13 • Have you ever spoken to someone and felt you weren't being
- 14
- 15 listened to?
- 16
- 17
- 18 • How did this make you feel?
- 19
- 20
- 21
- 22
- 23

24  
25 The debate stimulated led to the group members beginning to explore the  
26  
27 concept of communication from the standpoint that they knew and were  
28  
29 aware of. However, in order to enable them to develop and learn even  
30  
31 more about themselves an assessment quiz was utilised that would help  
32  
33 them to identify their dominant communication style (Sully and Dallas,  
34  
35 2010). Upon completion they were asked to discuss in pairs if the results  
36  
37 were what they had expected or whether they had learnt something  
38  
39 about themselves and furthermore, what did they think they now needed  
40  
41 to develop? To help them to focus on this task, theories of effective  
42  
43 communication were explored with the group. The importance of body  
44  
45 language and the fundamental role of non verbal communication were  
46  
47 highlighted by placing the participants into pairs and one of them telling  
48  
49 the other what they had done over the previous weekend, whilst the  
50  
51  
52  
53  
54  
55  
56  
57  
58  
59  
60

1  
2  
3 other had to deliberately avoid eye contact or display an annoying habit.  
4  
5  
6 The pairs then discussed how the exercises made them feel, the process  
7  
8 of which clearly illustrated the importance of body language and non  
9  
10 verbal communication. Barriers to communication, such as: environment,  
11  
12 jargon, status of communicators, fear, pain or high emotion, language and  
13  
14 cultural differences and preconceptions were explored. A healthy  
15  
16 discussion occurred as the groups recognised each of the barriers and  
17  
18 then identified ways of overcoming these. The group then explored the  
19  
20 significance of active and therapeutic listening where not just the  
21  
22 content but also the underlying message is comprehended and enhanced  
23  
24 by using reflective statements with patients. The specifics of  
25  
26 communication in health care were revisited from how a professional  
27  
28 perspective might hinder effective communication; this led to questioning  
29  
30 why they considered effective communication was important within a  
31  
32 team.  
33  
34  
35  
36  
37  
38  
39  
40  
41  
42  
43  
44  
45

46 At the end of the session the importance of understanding oneself was  
47  
48 reiterated. The concept of the Jung Personality test (Human Metrics  
49  
50 1998) was introduced as a mechanism to explore their own personalities.  
51  
52 This type of personality typing was used because it is renowned for its use  
53  
54 in helping individuals to grow and self develop (BSM consulting 2012),  
55  
56  
57  
58  
59  
60

1  
2  
3 which was a key concept of this project. Jung's theory of individuals is  
4  
5 based on psychological type based and the way we taking in information  
6  
7 and how we make decisions. The groups were hence directed to an online  
8  
9 Jung personality test where they could privately explore their own  
10  
11 persona. These were then explored within the group setting. It was  
12  
13 interesting that some participants found the results as no real surprise  
14  
15 yet believed they now understood more about themselves.  
16  
17  
18  
19  
20  
21  
22  
23  
24

#### 25 *Leadership, Management and Team Working*

26  
27 Leadership and management overlap and are often confused. This session  
28  
29 commenced by asking the group what they thought were the differences  
30  
31 between managers and leaders. Then definitions of managers and  
32  
33 leaders were given. For example 'Managers are people who do things  
34  
35 right.... Leaders are people who do the right thing' (Bennis and Nanus  
36  
37 1986).  
38  
39  
40  
41  
42  
43  
44  
45

46 According to Kotter (1990) 'management is about planning, controlling and  
47  
48 putting appropriate structures and systems in place, where as leadership  
49  
50 has more to do with anticipating change, coping with change and adopting  
51  
52 a new visionary stance' (Harvard Business Review 1990, 68, 103-111). It  
53  
54 was important for the group members to comprehend this to better  
55  
56  
57  
58  
59  
60

1  
2  
3 understand the different key players within the team environment. To  
4  
5  
6 emphasise the differences the group were shown pictures of different  
7  
8  
9 recognizable leader type personalities for them to explore who may be  
10  
11 perceived as a leader and how a consensus may not be achieved, because  
12  
13 of different leadership styles and of what constitutes an actual leader to  
14  
15  
16 different individuals.  
17

18  
19  
20  
21  
22 The groups were then asked to state how others would perceive them as  
23  
24  
25 leaders. The significance of this was to commence with how they  
26  
27  
28 perceived themselves. This was then explored by the group to see how  
29  
30  
31 they were viewed as leaders by the wider group (Businessballs.com 2005).  
32  
33 This culminated in a practical activity where they were required to lead  
34  
35  
36 their partner to achieve a particular task blindfolded. The session  
37  
38  
39 incorporated how leadership styles have changed over time. To embed  
40  
41  
42 this interactive and institutional leadership models were explored and  
43  
44  
45 how the former is recognised as being more beneficial to enhancing team  
46  
47  
48 spirit (Burham 2002). Group members discussed the approach they  
49  
50  
51 thought was being utilised in their work environment. Different personal  
52  
53  
54 leadership approaches were highlighted; co-ercive, pace-setting,  
55  
56  
57 visionary, affiliative, democratic and coaching (Change minds 2012) and  
58  
59  
60 group members considered which approach they used, when and why, and

1  
2  
3 the significance of using the appropriate approach to the situation in  
4  
5  
6 question.

7  
8  
9  
10  
11 This led on to how leadership is used to lead change. To illustrate this  
12  
13  
14 Burnham's (2002) Interactive leadership model was explained and  
15  
16 explored (figure 1), to visualise the components and the process followed.  
17  
18  
19 The key components of the actions stage: emotional intelligence; engaging  
20  
21 the group; leading change; and focusing on results were explored in  
22  
23  
24 greater detail.  
25  
26  
27  
28  
29

30 *Please place figure 1 here.*  
31  
32  
33  
34  
35  
36

37 Making links with authenticity embedded the role of emotional  
38  
39 intelligence and hence authentic and successful leadership were revisited  
40  
41 using a range of articles (Upenieks 2002, Upenieks 2003, Shirey 2006,  
42  
43 Triola 2007, Jumaa 2008, Shirey 2009). To ensure comprehension within  
44  
45 the groups authentic/successful leadership definitions and  
46  
47  
48 characteristics that form them were discussed by the students.  
49  
50  
51  
52  
53  
54

55  
56 *Quality*  
57  
58  
59  
60

1  
2  
3 In order to improve quality there is a distinct need to understand exactly  
4  
5  
6 what quality is. A group exercise, using Post It notes enabled the group  
7  
8  
9 to explore what they understood quality to mean to them. Definitions of  
10  
11  
12 quality were discussed: such as an essential or distinguished  
13  
14 characteristic, good moral, mental or aesthetic characteristic, virtue or a  
15  
16 degree of goodness. However, quality can also be seen in terms of  
17  
18  
19 customer wants, or in this case patient satisfaction (Deming 1991). The  
20  
21  
22 three dimensions explored were client quality - what clients and carers  
23  
24 want; professional quality - service need as defined by the profession and  
25  
26  
27 referrers and management quality - the most efficient and productive  
28  
29  
30 use of resources within set time limits set by those in authority and  
31  
32  
33 purchasers. Models of quality within health care such as Donabedian's  
34  
35 (2003) that describe and explain quality in terms of structure, process  
36  
37  
38 and outcome and Maxwell's six dimensions (2003) were incorporated.  
39  
40  
41 Using a combined Wright's matrix of the two models illustrated a therapy  
42  
43  
44 quality assurance strategy (Table 3). The limitations of this approach  
45  
46  
47 shared were that neither, Donabedian's or Maxwell's models focus  
48  
49  
50 specifically on patient needs or that of the whole organization.

51  
52  
53  
54 *Please place table 3 here*  
55  
56  
57  
58  
59  
60

1  
2  
3 Quality and its application to children's nursing practice were included.  
4  
5  
6 Guidance notes on the 5 why's technique (Jasper, 2006) provided a  
7  
8 definition, benefits, how to use the 5 Why's and examples of how to apply  
9  
10 them was given to the group (IMS International 2010). They were also  
11  
12 given details of the Critical Incident Technique (CIT) which included an  
13  
14 overview and a process map for CIT interventions (Serrat 2010).  
15  
16  
17 Alongside this a template for the Plan, Do Study and Act (PDSA)  
18  
19 Improvement cycle (NHS Institute for Improvement and Innovation  
20  
21 2008) was elaborated upon. The groups were asked to complete the  
22  
23 PDSA in relation to an incident they had experienced. The process of  
24  
25 applying the theory and the solutions they arrived at were shared with  
26  
27 the wider group to enable lessons to be embedded, as storytelling is a  
28  
29 powerful resource to learning (Heath & Heath 2008).  
30  
31  
32  
33  
34  
35  
36  
37  
38  
39  
40

41 Quality was related to them by using Ralph Waldo Emerson's quote 'Make  
42  
43 the most of yourself, for that is all there is of you" (ThinkExist.com  
44  
45 1999). To apply this, the group had to explore quality in relation to a role  
46  
47 in their life. The role was written onto the centre of a circle, on the  
48  
49 periphery they had to write statements about how they undertake this  
50  
51 role. Each statement then was allocated a weighting from 1-10 as to how  
52  
53 much quality they gave to each statement. The reason for using a  
54  
55  
56  
57  
58  
59  
60

1  
2  
3 personal role was because it would enable them to explore a concept they  
4  
5 were very familiar with. Once completed, a number of questions were  
6  
7 posed:  
8  
9

- 10
- 11
- 12
- 13
- 14 ➤ What have you learnt?
- 15
- 16
- 17 ➤ Are you doing enough?
- 18
- 19 ➤ Could you do more?
- 20
- 21
- 22 ➤ What more could you do?
- 23
- 24
- 25
- 26

27 The group members were very comfortable exploring a personal role in  
28 depth and stated they had learnt a lot from the exercise. This was then  
29 expanded to enable them to explore their roles at work. The transition  
30 was made by using another quote: "Pray as though everything depended  
31 on God, work as though everything depended on you" Saint Augustine  
32 (Think Exist.Com 1999). The same exercise was then undertaken, but  
33 this time their role/position was written in to the centre of the circle.  
34  
35 On the periphery the different aspects of the role were stated.  
36  
37 Subsequently each statement was allocated a number between 1-10 as to  
38 how much quality they gave to each aspect. The same reflective  
39 questions were then applied. Strangely enough the group participants all  
40 acknowledged that much less quality was being given to their work roles  
41  
42

1  
2  
3 than their personal roles. In order to illustrate how developments in  
4  
5 quality could be made in their roles at work, a copy of their job  
6  
7 description was given to them. From this each participant added those  
8  
9 aspects outlined within their job description that had been omitted from  
10  
11 their statements. They were then asked to explore what they had learnt  
12  
13 from the exercise about their role today. The result was interesting as  
14  
15 some were suddenly defensive about their actions, which had not  
16  
17 occurred when they had openly discussed their personal relationships.  
18  
19 Questions were then posed as to why there had been such a different  
20  
21 reaction.  
22  
23  
24  
25  
26  
27  
28  
29  
30  
31

32  
33 Accountability enabled them to transition their ideas and explore how  
34  
35 they demonstrate accountability both as individuals and as team  
36  
37 members. Cartoons and comic strips were used to illustrate the futile  
38  
39 efforts individuals will go to not accept accountability and responsibility  
40  
41 (Figure 2) (Savage 2006).  
42  
43

57  
58  
59  
60

1  
2  
3 To explore this concept the question was posed: How do we demonstrate  
4 we are taking responsibility? Using a personal example from life to  
5 illustrate, each group member had to make a statement, e.g. I take  
6 responsibility for my health by what I choose to eat and how much or  
7 little I exercise. The group commenced discussing examples of how they  
8 took responsibility in their own lives. An example was then given by the  
9 facilitator of how responsibility had to be taken if a whole cohort of  
10 students failed an assignment. This may be due to the fact that the  
11 facilitator had not explained the task clearly. This resulted in a  
12 discussion of how simple or challenging taking responsibility actually is,  
13 and the skills needed to undertake it.  
14  
15  
16

27  
28  
29  
30  
31  
32  
33  
34

35 Duty of care was included because as health professionals they needed to  
36 comprehend that their duty of care required them to take responsibility.  
37  
38 A duty of care was defined using the UNISON duty of care handbook  
39 (2011) as an obligation implicit in their role as a health worker towards  
40 their patients/service users, colleagues, employer, self and public  
41 interest. However, the focus was not just on obligations but also on what  
42 makes employees function most effectively, because employee fulfillment  
43 has four key components (Barrett 2011) (Table 4).  
44  
45  
46  
47  
48  
49  
50

55  
56  
57  
58  
59  
60

*Please place table 4 here*

The work on the unit and how this did or did not fulfill these components was discussed and group members were encouraged to continue their personal reflections within their reflective journal. The concept was discussed that they needed to understand themselves and what they needed before they could ask for it. By exploring their own roles they were able to highlight what they did well and what areas they could develop and improve with help and guidance. From this the group members identified what support they perceived would be beneficial from management. These were noted, maintaining confidence and fed back to the management by the facilitators.

#### *Presentations*

An array of topics were presented by the group members ranging from materials for health promotion for children and parents to teaching sessions/ resources for colleagues and students and there was a range of quality to them. Unfortunately a number of group members were unable to attend the final session due to work commitments and sickness. The quality of some of the presentations were limited, however the group did explore their contribution to this and what they would do differently in future.

## Evaluation

Evaluation of the project was undertaken in a number of ways:

- Pre and post questionnaires per session - to identify knowledge and learning gained.
- Overall evaluation of the project which enabled the group members to explore the benefits and disadvantages of project participation.
- Trust evaluation that incorporated a synopsis of the group feedback.
- Personal evaluation of what they had learnt and the actions required of them to get the most out of participating in the project.

### *Personal evaluation*

The students were given a template (figure 3):

*Please place figure 3 here.*

1  
2  
3 In order to evaluate what they had personally gained from undertaking  
4 the project they were given the template show in figure 2. They were  
5 asked to complete in green ink what they had learnt and in red ink what  
6 actions they identified to continue to develop themselves. Table 5  
7  
8  
9  
10  
11  
12  
13 illustrates the lessons they recognised they had learnt and what actions  
14 they felt they now needed to make to get the most out of what they had  
15 learnt.

29

### 30 *Overall Evaluation*

31  
32 The overall evaluation for the project enabled the groups to explore what  
33 they had gained from completing the team building project. The questions  
34 they were asked to evaluate the project are outlined in table 6 below.  
35  
36  
37

#### 14 **Conclusion**

15  
16 Overall the project evaluated very well. It combined interactive  
17 methods, group work and team building exercises with self reflection.  
18  
19 Emphasis was placed on how the group members could develop themselves  
20 and maximize the impact on the team and on quality indicators for patient  
21 care.  
22  
23  
24  
25  
26  
27  
28  
29  
30  
31

32 Since the project has been completed the teams have been more  
33 cohesive, and the staff have been working effectively as a team. There  
34 has been an improvement in communication amongst the staff. Staff  
35 appear more aware of colleagues' roles. The senior staff have been  
36 working more regularly in direct patient care and shift patterns which  
37 has enhanced relationships between the managers and the team.  
38  
39  
40  
41  
42  
43  
44  
45  
46  
47

48 Some staff have developed further in their areas of interest and this  
49 has led to promotion for some such as Clinical Nurse Specialist posts.  
50  
51 Some staff have identified areas they will need to develop further and  
52 have progressed on to do modules for their degree and also mentorship

Tables for Team Building Project to enhance quality care indicators

Table 1

Hard theory	Rationale
Leadership + exercises	Gave insight into the differences between the concepts of leadership and management.
Team building + exercises	Provide an opportunity for the groups to illustrate effective team working.
Quality	Demonstrated the significance of quality and how this impacted on the care of children and families.
Practice development	Facilitate an opportunity for the groups to develop an aspect of practice/area of interest
Soft theory	Rationale
Motivation	Provide a core understanding of what motivates them and how motivation impacts on our actions.
Jung personality test	Identify their strengths and limitations and know what areas to develop.
Self awareness	Fundamental to effective functioning as a human being and how their behaviour may be perceived and

	affects others.
Communication	Vital component in all aspects of life; teams and working with families included.
Self- Actualisation	Ability to fulfil own true potential. Transferring qualities and skills from personal to work life.

Table 1 - Overview of Hard and Soft theory and rationale

Table 2

Who else do you communicate with other than the patient/child?
Children
Families
Colleagues
Other health professionals
Play specialists
Ward clerk
Porters

Table 2 - Persons other than patients communicated with.

Table 3

Wright's Matrix			
	Donabedian's approach		
	Structure	Process	outcome
Maxwell's Dimensions			
Access	Child friendly location (pushchair access)	Easy booking, sufficient appointments	Parent and child attend
Equity	Facilities for families with special needs (physical/hearing problems)  HP resources in range language	Different appointment lengths available	Attendance - families feel they have been listened to
Appropriate, relevant to need	Facilities for hearing testing (soundproofed?)	Programme reflects client group e.g. Anaemia screening inner city area	Hearing problems detected
Acceptability	Clinics at appropriate time e.g. Not at same time as methadone clinic	Programme acceptable to parents - doesn't not include unacceptable tests (HIV?)	Attendance
Efficient	Skill mix of	Programme does not include inefficient	Cost per annum

	examiners	tests	identified problem
Effective	Equipment in good working order e.g. Calibrated instruments	Programme contains only effective tests.	Children with developmental problem identified.  Parents correctly reassured over concerns

Table 3 Wright/Maxwell and Donabedian's matrix

Table 4

Component	Aspect
Physical fulfilment	A decent wage and outstanding employee facilities - canteen, nursery, gym.
Emotional fulfilment	Open communication, friendliness, work appreciation and professional growth
Mental fulfilment	Accountability, opportunity to learn, to express personal creativity and find personal growth.
Spiritual fulfilment	Work that has personal meaning, a sense of making a difference, and an opportunity to be of service

Table 4 - Four components of employee fulfilment (Barrett 2011)

Table 5

What I have learnt	Actions to develop
To aim high	I didn't feel I accomplish my set goals of giving 100% always
Ambition to see my end result first	My presentation needed more

	effort and enthusiasm
What you put in is what you will get	Stop thinking of excuses and just do your best
Be punctual - work on yourself first	Making sure everyone attends all sessions
Think you are being looked up to by parents, child/family	Shorter, longer and regular sessions
Be a good leader, manager, listen before you contribute → better team member	I just wish it (the project) could have been longer and hope everyone gets the chance to do this.
Run the extra mile	
Self motivation	
Motivation from other people	
Types of leadership → successful leadership	
Reflection about what I have done	
Learning about myself	
Determination	
To start doing things	
To focus on me, what I want	
To find what motivates me and stick to it	
To help me further in life and solve problems	
Taught me how I am as a person	
To think more clearly	
To focus on things that actually matter	
To see things differently	
Use experiences to do better and not repeat the bad	
To become a better and stronger person	

1	
2	
3	To motivate myself to be better at my
4	job and course
5	
6	Work more now
7	
8	This course has made me re-evaluate my
9	life and job
10	
11	I have applied the principles to everything
12	I do both at home and at work
13	
14	My communication skills have improved
15	greatly
16	
17	I am thinking more now
18	
19	My anger with certain things has
20	disappeared
21	
22	Nothing matters anymore as long as I give
23	my all in a positive way
24	
25	I'm more positive now
26	
27	I now feel like I belong to a team rather
28	than a group of people
29	
30	I have given more respect and vice versa
31	
32	My approach to things has
33	improved/changed
34	
35	I think the teacher was great in my
36	practice sessions
37	
38	Very engaging
39	
40	Great work
41	
42	
43	
44	

Table 5 - What group had learnt and actions they needed to take to develop

Table 6

Evaluation
How applicable was the content of the Project to your role and the team?
How has the project enhanced your practice?
What area have you developed?
What areas do you plan to develop further to enhance clinical practice or your role?
How has this project benefited the ward? Please link to QIPP (Quality, Innovation, Productivity, Prevention)?
How has what you have learnt benefitted the team?
How can you link what you have learnt in the project to your future Continuous Professional Development?
How can you link the knowledge, skills or experience gained with the pre-registration or post-registration curriculum?

Table 6 - Questions asked in the Evaluation

Table 7

Comments from the student evaluations
<i>"The course has enabled me to know more of my role and other people's role"</i>
<i>"I am able to understand tools to improve practice"</i>
<i>"The project has enhanced my practice by enabling me to share ideas and concerns with the others and see things from others perspectives"</i>
<i>"The project has reminded me of my accountability, responsibility and duty of care which has a direct benefit to the ward as I am more conscious of how I do"</i>
