Uncovering the linguistic foundations of consumer stories

Tom van Laer
Agenda:

1. Consumer stories
2. The power of storytelling
3. Building consumer stories' structure
4. Text mining procedure
5. Results
6. Lessons learned and still to learn
A review of Mystery Adventures, a real-life gaming experience:

“Great Fun...for a Puzzle Person”

Reviewed May 28, 2011

This is definitely an unusual thing to do in Las Vegas, but can be a wonderful change of pace. If you are into CSI and like solving mysteries, this is for you. If you'd rather just kick back and enjoy the show, this might be a bit much. Max seemed nervous at first with lots of 'uhhh's and ummmms, but warmed up quickly. The mystery started out slow...which might be natural, but picked up pace and excitement as the night went on. And it did go on...from 7pm to well past 10pm. Very exciting and worth the effort we put into it.

(Nielsen, 2013)
Consumer stories

Gap in research on consumer stories; Reviews in our research

Prior research solely provides a valid description of consumer stories of (hedonic and utilitarian) material purchases.

“Material purchases are those made with the primary intention of acquiring a material good: a tangible object that is kept in one’s possession” (van Boven and Gilovich 2003, 1194)

My research focuses on

- **Experiential purchases**
  “those made with the primary intention of acquiring a life experience: an event or series of events that one lives through”
  (van Boven and Gilovich 2003, 1194)

- **Narrative structure**
  which describes the experience consumed and recounted by the reviewer
Consumer stories

Research objectives

1. Organize the relations among words within experience reviews, which are currently considered manifold and indeterminate, in a narrative structure

2. Provide an instrument for examining the role of change in emotions over sentences and whether there are intertextual differences in this shape
The conceptual building blocks of my work are four:

1. Identifiable characters
2. Imaginable plot
3. Genre
4. Narrative transportation
Key constructs: The source of the fountain

1. **Identifiable characters** are clearly pinpointed personas through which the consumer “speaks” to the consumer (Stern 1994). They play a role in the events and consumers can empathize with them (Slater and Rouner 2002).

2. **Imaginable plot** is the articulated sequence of events that happen to the characters in a described setting (Escalas 1998). It frames the temporality of the events, such that consumers feel as though they are experiencing the events themselves (Green and Brock 2002).

3. **Genre** is the different story shapes that emerge from culturally determined conventions in a given society in a given time (Genette 1979/1992; Plato 380BC/2008). It results from the modulation of the emotional intensity along the plot and make consumers experience suspended reality (Gergen and Gergen 1988).
Narrative transportation constitutes the vehicle for the power of storytelling:

4. **Narrative transportation** is the extent to which (1) a consumer empathizes with the story characters and (2) the story plot activates his or her imagination, which leads him or her to experience suspended reality during story reception (van Laer et al. 2014).
Building consumer stories’ structure

1. Narrative structure elements of identifiable characters

a) Landscapes of affective and cognitive consciousness

Definition: The extent to which the consumer story recounts an initial event about which a character expresses feelings or thoughts that, in turn, lead to a course of action by a character (Bruner 1986).

Proposed effect: Consumers make more inferences and exert more effort to identify characters when a story has well-developed landscapes of consciousness (Feldman et al. 2014).

c) Canonicity

Definition: The extent to which the consumer story explains how a course of action by a character results in a particular outcome (Pennington and Hastie 1988).

Proposed effect: More compelling stories consist of multiple goal-oriented action sequences (Stein and Albro 2010).
Building consumer stories’ structure

2. Narrative structure elements of imaginable plot

a) Temporal embedding
   Definition: The extent to which the consumer story is organized in a temporal sequence and provides causal links between the events that occur (Escalas 1998; Thompson 1997).

b) Spatial embedding
   Definition: The extent to which the consumer story focuses on and explains particular events (Escalas and Bettman 2000).
   Proposed effect: Especially transporting stories usually pay attention to setting the scene of the narrative world by repeatedly offering illustrations (Gerrig 1993).

c) Drama
   Definition: The extent to which the canon is breached (Burke 1962).
   Proposed effect: If consumers strive to understand and explain these breaches, they may experience narrative transportation because more effort leads to more narrative transportation (Nielsen and Escalas 2010).
Building consumer stories’ structure

2. Narrative structure elements of genre

- **Progressive genre**
  **Definition:** Events continuously improve for characters over the course of the storyline (Gergen and Gergen, 1988).

- **Regressive genre**
  **Definition:** Events decline over the course of the storyline (Gergen and Gergen 1988).

- **Stable genre**
  **Definition:** Events neither improve nor decline over the course of the storyline (Gergen and Gergen 1988).

- **Romantic comedy**
  **Definition:** Events start out favorable, deteriorate, and end on a positive note (Gergen and Gergen 1995).

- **Tragedy**
  **Definition:** Events start out unfavorable, ameliorate, and end on a negative note (Freytag 1863/2003).

**Proposed effect:** Emotional story shapes that change over the course of a storyline are more engaging than those that do not alternate in sign (Vonnegut 2005).
## Text mining procedure

### Identifiable characters:

- *n*-gram operationalisation, representative words, and words in dictionary entry

<table>
<thead>
<tr>
<th>Elements</th>
<th>Operationalisation</th>
<th>Representative words</th>
<th>Words in dictionary entry</th>
</tr>
</thead>
<tbody>
<tr>
<td>Landscape of affective consciousness</td>
<td>Presence of trigram: motion–affective process–motion</td>
<td>arrive, car, go abandon, cried, happy</td>
<td>168 915</td>
</tr>
<tr>
<td>Landscape of cognitive consciousness</td>
<td>Presence of trigram: motion–insight–motion</td>
<td>consider, know, think</td>
<td>195</td>
</tr>
<tr>
<td>Canonicity</td>
<td>Presence of bigram: motion–space and/or motion–time in the last two sentences</td>
<td>down, in, thin end, season, until</td>
<td>220 239</td>
</tr>
</tbody>
</table>
## Imaginable plot:

*n*-gram operationalisation, representative words, and words in dictionary entry

<table>
<thead>
<tr>
<th>Elements</th>
<th>Operationalisation</th>
<th>Representative words</th>
<th>Words in dictionary entry</th>
</tr>
</thead>
<tbody>
<tr>
<td>Temporal embedding</td>
<td>Presence of unigram: time/cause</td>
<td>end, season, until, because, effect, hence</td>
<td>239, 108</td>
</tr>
<tr>
<td>Spatial embedding</td>
<td>Ratio of unigram: space</td>
<td>down, in, thin</td>
<td>220</td>
</tr>
<tr>
<td>Drama</td>
<td>Ratio of unigram: surprise</td>
<td>amazed, astonished, shocked, startled, stupefied</td>
<td>32</td>
</tr>
</tbody>
</table>
Text mining procedure

Genre: *D-gram operationalisation, representative words, and words in dictionary entry*

<table>
<thead>
<tr>
<th>Elements</th>
<th>Operationalisation</th>
<th>Representative words</th>
<th>Words in dictionary entry</th>
</tr>
</thead>
<tbody>
<tr>
<td>Genre</td>
<td>Presence of sentence-level <em>D</em>-gram: absolute difference of positive emotion unigram and negative emotion unigram</td>
<td>love, nice, sweet hurt, nasty, ugly</td>
<td>406 499</td>
</tr>
<tr>
<td>Progressive</td>
<td>Presence of linear degree of increase of <em>D</em>-gram shape</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Regressive</td>
<td>Presence of linear degree of decrease of <em>D</em>-gram shape</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Stable</td>
<td>Presence of a rate of change near zero for <em>D</em>-gram shape</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Romantic comedy</td>
<td>Presence of negative curvilinear degree of <em>D</em>-gram shape (i.e., u-shape)</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Tragedy</td>
<td>Presence of positive curvilinear degree of <em>D</em>-gram shape (i.e., inverted u-shape)</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

The review of Mystery Adventures as an example

This is definitely an unusual thing to do in Las Vegas, but can be a wonderful change of pace.

If you are into CSI and like solving mysteries, this is for you.

If you'd rather just kick back, this might be a bit much.

Max seemed nervous at first with lots of 'uhhh's and ummmms, but warmed up quickly.

The mystery started out slow..which might be natural, but picked up pace and excitement as the night went on.

And it did go on...from 7pm to well past 10pm.

Very exciting and worth the effort we put into it.

Future research

I detect three trajectories for future research:

1. **(Re-)defining narrative structure:** The preciseness of the story definition can be challenged. The increasingly popular flash fiction and the Twitter effect (Hennig-Thurau, Wiertz, and Feldhaus 2015) support the notion of very short stories.

2. **Effects on conversion:** Empirical work on the conversion effects of narratives is scant (van Laer et al. 2014). However, recent developments in digital libraries indicate that there is ample opportunity to investigate conversion as an additional consequence of a narrative structure (e.g., Google Books, the Internet Archive, and Project Gutenberg).

3. **Effects on brand public:** A line of research into possible brand public creation or strengthening as a consequence of consuming narratives, which violate economic principles, can be initiated (Arvidsson and Caliandro 2015, McQuarrie, McIntyre, and Shanmugam 2015).
