"Never again the in the history of humanity": information education for onlife

David Bawden and Lyn Robinson

Keynote paper presented at the International Symposium of the Future of Education in Information Science (FEIS 2018), Pisa, September 2018

Summary

It has become commonplace for those involved in the education of information professionals to note the need for new skills and competencies in an ever-changing and increasingly challenging digital information environment. This presentation examines this perception through the lens of Luciano Floridi's concept of the 'infosphere', and suggests some appropriate responses by educators in library and information science (LIS). It builds upon a presentation by Lyn Robinson at an earlier multiplier meeting of the EINFOSE project, on developing standards for LIS education.

Floridi (2018) explains the infosphere as the condition of 'onlife', a seamless merging of analogue and digital, offline and online, and points out that the transition to onlife has already happened, and happens only once in the history of a species. Those of us teaching LIS today are the only generation that will ever experience the world before and after this transition. It is therefore no surprise that the LIS profession, and LIS education, seem in a state of constant transition.

This presentation reflects on this, and suggests some responses, particularly in education for data management and for digital ethics, to prepare our students to participate in the design and curation of the infosphere, and of the information society which will inhabit it. It evokes cyberpunk author William Gibson's comment that the future has already arrived but is not evenly distributed, and local historian W.G. Hoskins' principle that "it's older than you think", to argue that we can look to the present and indeed the past in assessing the needs of the future. Following Floridi, we argue that what is needed is a careful study of our direction of travel, not simply a speeding up of our activities; and this applies to LIS education as much as to our professional activities.

Ljubljana, April 2018

A conventional viewpoint

new skills and competencies in an ever-changing and
increasingly challenging digital information environment

Luciano Floridi's Philosophy of Information

- fourth revolution
- hyperhistory
- infosphere
- onlife

Today, in any mature information society, we no longer live online or offline but *onlife*, that is, we increasingly live in that special place, or *infosphere*, that is seamlessly analogue and digital, offline and online. (Floridi 2018)

Onlife

- a seamless merging of analogue and digital, offline and online
- in a society where ICTs are the essential basis (hyperhistory)
- where we share the infosphere with other 'inforgs', such as AIs

.. the revolution has already occurred: the transition from an entirely analogue and offline world to one that is increasingly also digital and online will never happen again in the history of humanity... our generation is the last one that will have seen a non-digital world. And this is the really extraordinary turning point, because that landing in the infosphere happens only once. (Floridi 2018)

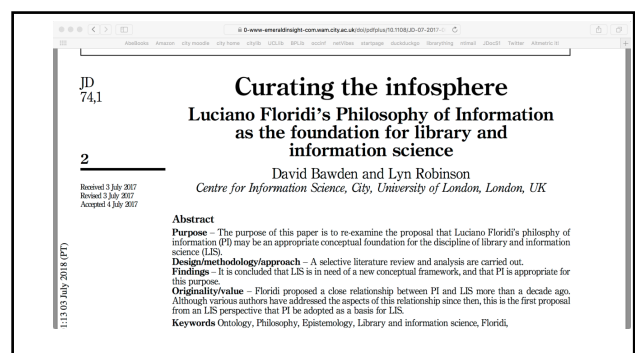

LIS “in permanent transition”

- the transition to onlife has already happened
- it happens only once in the history of a species
- we are the only generation that will ever experience the world before and after this transition

We should not be distracted by the scope, depth and pace of technological innovation ... It is rather how we are going to design the infosphere and the mature information societies developing within it that matters most ... the real challenge is no longer digital innovation, but the *governance of the digital* (Floridi 2018)

The polluted infosphere

- fake news, alternate facts
- misinformation disinformation
- post-truth society, post-factual society
- death of expertise
- filter bubbles, echo chambers
- toxic social media

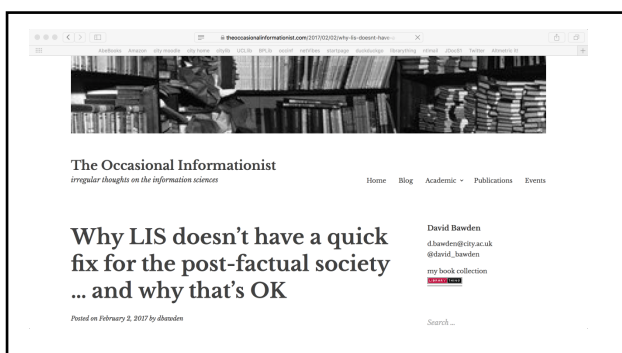

Curating and reshaping the infosphere

- solving the problems of fake news and the rest requires a reshaping of the infosphere, our whole information environment and our interactions within it
- the more important the problem, the more it needs a long period of reflection to find the best solution

When change is dramatic and rapid

- we need to think deeply
 - and slowly
- we need to plan our direction
 - not increase our speed

The best way to catch the technology train is not to chase it, but to be at the next station (Florida 2018)

William Gibson

The future has arrived - it's just not evenly distributed yet

It's older than you think (W.G.Hoskins)

So: how to educate for LIS

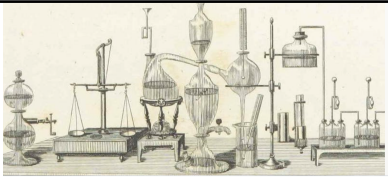

- prepare our students to participate in the design of the infosphere, and the information society which will inhabit it
- to be 'curators of the infosphere'
- lasting principles, not quick fixes
- right use of technology, not just digital fluency
- identify the future in the present (and the past)

The story of data

- module replacing 'data and information technologies'
- very practical, but no computer labs
- all sessions focus on right use of technology:
 - privacy, algorithm bias, digital divide, robotics, etc.
 - as well as on the technology itself
- all sessions include examples of 'the future here, now'
 - as well as on 'the past in the present'

- | | |
|---------------------------|-----------------------------|
| • finding the I in data | • working with the data |
| • you will be assimilated | • counting the data |
| • data about data | • the meaning in the data |
| • taming the data | • the data will replace you |
| • searching for the data | • playing with the data |

British Library Labs Symposium (2018)

by British Library Labs

Free

[REGISTER](#)

DESCRIPTION

The BL Labs Symposium is an international annual networking event and awards ceremony showcasing innovative projects which have used the British Library's digital collections and data over the past year. The awards recognise outstanding use of British Library's digital content in the categories of Research, Commercial, Artistic, or Teaching & Learning.

DATE AND TIME

Mon 12 November 2018
09:00 – 17:30 GMT

[Add to Calendar](#)

Putting ethics everywhere

- no 'ethics' course
- ethics comes everywhere:
- technology, knowledge organisation, information management, research methods, digital libraries, etc.
- fundamental to curation of the infosphere

What is our *human project* for the digital age? (Floridi 2018)

and what is LIS's contribution to it?
