Appendix 3a Pre-test questionnaires for medical students in study of MEDLINE

Questionnaire

Ref. No. _____

This section is design to assess your educational background in relation to the subject area of the study. Please add any further comments that you feel are helpful or ask if a you are unclear about anything.

For the purpose of this study definitions for the following terms are as follows:

Information retrieval system : any computer based system which can be used to find information on a particular topic eg. Library catalogue system; pysclit; Medline etc.

Search : the seeking of information to satisfy a single task

Information Need : A need arising from the lack of knowledge relating to a problem situation

1. Have you ever conducted a search for information using the Medline database ?

Yes _____
No _____ -> go to 7

If "Yes" At what approximate date did you last use this?

_____ Date

2. How many searches have you performed on Medline in the past ?

a) Year _____ Searches

b) Month _____ Searches

3. How much time was spent interacting with this database at each visit (approx. hrs.) ?

_____ hrs.

4. Is this a typical monthly activity

Yes _____
No _____

If "No" what is the activity for a typical month ?

Number of searches _____

Interaction time per use of the system _____

5. Can you list the facilities that you use or normally use whilst searching the Medline database?
 (e.g. thesaurus, Index, search operators, etc.)

Facilities

6. Do your searches generally focus on a single subject area (eg. cardiology) or multiple subject areas
 (eg. cardiology and casualty policy) ?

Multiple _____ Single _____

7. Have you **ever** performed searches on other information retrieval systems (e.g. library system,
 article index, etc.) ?

Yes _____
 No _____ -> go to 11

8. Please fill in the table about information retrieval systems you have used in the **past month** ?

Database name (eg. Medline , Library catalogue etc.)	Database type (e.g. text article retrieval etc.)	Number of searches (search is defined as the retrieval of information to satisfy an information need)	Time spent using the system (approx. hours)

9. Is this a typical months activity

Yes _____
 No _____

If "No" please fill in the table below for the activity of a typical month?

Database name (e.g Medline, Library Catalogue etc.)	Database type (eg. text article retrieval etc.)	Number of searches (search is defined as the retrieval of information to satisfy an information need)	Time spent using the system (approx. hours)

10. In what year did you first use an information retrieval systems?

_____ Year

If less than 1 yr. ago in what month was this ?

_____ Month

11. Have you undergone formal training in the use of information retrieval?

Yes _____ . Please fill in the table below on the extent and level of this
 training

No _____ -> go to 12

Type of training e.g.(course; tutorial; book; pamphlet and other) if other please state what	Year of training	Level of educational or job training (e.g. undergraduate etc.)	Information retrieval system specific (Yes/ No)	Name of the system trained on (eg. Medline, Library system etc.)	Subject area training aimed at (e.g. computers; medicine etc.)

12. Please fill in the table about your behaviour when you are looking for sources of information:

Subject topic areas you generally search for information on	Method of searching for information (Paper based/ Computer based / Both)	Reason for choice of search method

13. Please fill in the table about the databases you would normally use when looking for information. When you start a search do you have a clear picture of the information you want or do you develop this picture of the information required as you use the database?

Database name	Information required	
	Clear at start	Developed using database

14. In general how often do you perform the same searches at different points in time, either due to search failure or due to the occurrence of the same information need?

_____ None / Times returned to the same search topic

15. Considering your educational background, searching you have done and any other sources of information (eg. text books), how familiar are you with the subjects of:

Subject	Not at all familiar (No previous knowledge)	Little familiarity (Awareness of some topics within the subject area)	Quite familiar (Knowledge of the structure and topics incorporated within the subject area)	Very familiar (Expert in the subject area with in depth knowledge of the subject area)
A Obstetrics				
B General Medicine				
C Cardiology				
D Public Health				
E Neurology				
F Oncology				

16. Please list any educational qualifications or jobs held and their level in the following subject areas.

Subject area	Type of educational material (book; pamphlet and other) if other please state what	Job or educational training (eg. course or tutorial)?
Obstetrics		
General Medicine		
Cardiology		
Public Health		
Neurology		
Oncology		

Appendix 3b Tutorial document for the MEDLINE interface

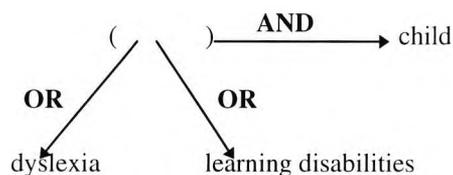

Ref. No. _____

Training material about the Medline information retrieval system

This training document outlines the searching language and retrieval facilities of the Medline database. This information will aid you in the production of effective and efficient search strategies which targets information that satisfies your requirement.

Medline language which allows the construction of search strategies

The Medline search language allows you to produce complex and precise strategies of related terms eg.

This section of the training material will first introduce the operators for combining terms and then will show the structure of valid search statements for the database. Please note that all searches are *upper/lower case insensitive*.

Medline Operators:

Medline search operators allow the combination of terms into complex inter-related structures. The structures are matched by the computer against the articles in the database.

Operator	Action produced	Example	Results
AND	Finds articles that contain <u>both</u> of two terms	dyslexia AND child	Articles are returned by the system which include both dyslexia and child. These terms may occur in any of the fields for an article i.e. title, abstract etc.
OR	Finds articles that contain <u>either</u> or <u>both</u> of two terms	dyslexia OR learning disabilities	This operator allows the search to be kept broad and can be used to broaden a previous search. It expands the number of articles deemed as relevant to the task as it returns all articles in which the terms are present either together or separately .
NEAR	Finds articles that contain <u>both</u> of two terms in the <u>same sentence</u>	dyslexia NEAR child	Articles will be returned only if the terms given are within the proximity of the same sentence . Thus this can be used to narrow the articles seen as relevant if it is expected that the terms are tightly related to each other.
NOT	Finds articles that contain one term but <u>not</u> another	dyslexia NOT adult	This allows you to exclude articles which are known to be within the subject topic area of the search but aren't relevant to the task you are trying to perform. Thus this allows the narrowing of the articles which are relevant.
IN	Finds articles that contain a term <u>in</u> a <u>specified field</u>	Freud IN au	Articles are returned in which Freud is the author
WITH	Finds articles that contain <u>both</u> of two terms in the <u>same field</u>	dyslexia WITH child	This retrieves articles in which the terms dyslexia and child occur in a single field. i.e. in the title, abstract etc.

Valid Search Statements:

This section shows the valid syntax for search statements. Strategies can be defined which allow you to locate the information required precisely and, with the use of search operators, allow the refinement of search strategies in the light of search results. These facilities allow your search strategy to develop in response to information gained whilst searching, aiding in the development of the problem situation to be solved. These valid search statements are all entered in the search field.

Type of search	Syntax	Examples
Specific term	term	dyslexia child
Term with truncation and thus all concepts which include the letters given by the searcher	part_of_a_term*	haem* child*
Term with wild cards and thus all terms which include the two strings given around a central undefined string.	term_part1?term_part2	colo?r ch?ld dysl?a
Building on a previous search requests	#Search_Strategy_Number Search_Operator term	#3 AND blood #3 OR blood #3 NEAR blood
Phrase which is to be matched in its entirety and thus terms which occur in this order and proximity	term term term	new york city learning disabilities
Phrase with hyphens	term-term	drug-abuse
Term or Phrase limited to a field	term IN field_identifier	Freud IN au English IN cp
Multiple terms combined with operators. Allowing a search to be given a more complex and inter-related structure	term Search_Operator term Search_Operator term	dog OR puppy OR canine dyslexia OR child (dyslexia OR learning disabilities) AND child
Multiple terms separated by semi-colons in which a separate search is implemented for each of the concepts given but these will not be combined at all. Thus there will be an article set for each of the terms between the semi-colons	term; term; term	heart; lung; liver
Any of the above can be grouped with parenthesis	(term Search_Operator term) Search_Operator term	(dog OR Heart) NEAR puppy (lung NEAR cancer) AND causes

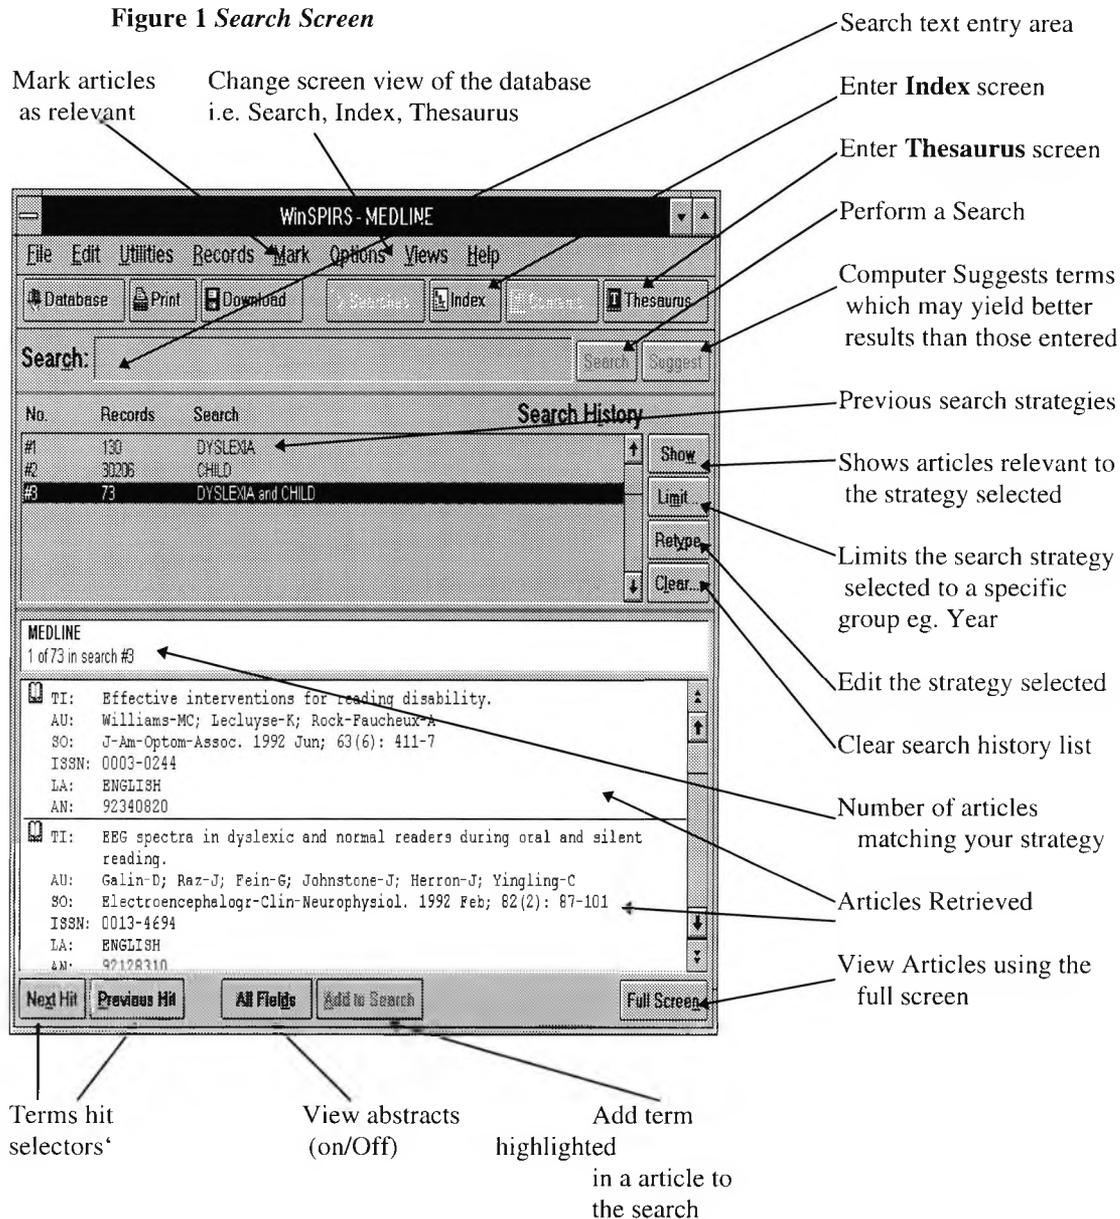

Medline retrieval facilities

Search: allows strategies (terms and search operators) to be performed. Search strategies can be progressively refined using Medline search operators to link new terms with previous strategies.

To perform a search:

- 1// Type the strategy to be used into the search text entry area (eg. dyslexia AND child)
- 2// Perform the search by clicking on the Search button

Figure 1 Search Screen

Current search history: Strategies contained in the *Search History* (see figure 1) in the *Search Screen* are reusable through their selection and modification.

To re-use a past search strategy

- 1// Selection is performed by double clicking on the strategy one wishes to use.
- 2// Modification can be performed in two ways:
 - a) Click on the re-type button and amend the strategy by selecting the portion to be changed using the left and right cursors and editing the target text.
 - b) Use Medlines search operators to alter the granularity of the search e.g. AND cancer
- 3// Perform the search by clicking on the Search button

Employing operators to narrow and broaden searches:

Medline allows the production of complex searches in which the results of previous searches can be used to develop a narrower or broader selection of articles. This is done by narrowing or broadening the terms used by either using the *Thesaurus* (to be described later) to widen the scope of the terms used or extending the search strategy using AND and OR operators. For example #1 AND child, #1 OR child where #1 identifies the strategy number 1.

Performing lateral searching : terms included in the articles resulting from a previous search can be selected using the mouse and then searched for directly without having to re-type the key terms.

- 1// Select "term" within the record by double clicking on it with the left mouse button
- 2// Click on the **Add to Search** button
- 3// Click on the **Search** button

Note. This doesn't narrow down the search but implements a new search/ search space.

Index: Alphabetical list of the terms for various fields and field sets (author, abstract, etc.) in the database and the number of articles which contain the term. The default is to use the indexes for all fields.

To Search the Index:

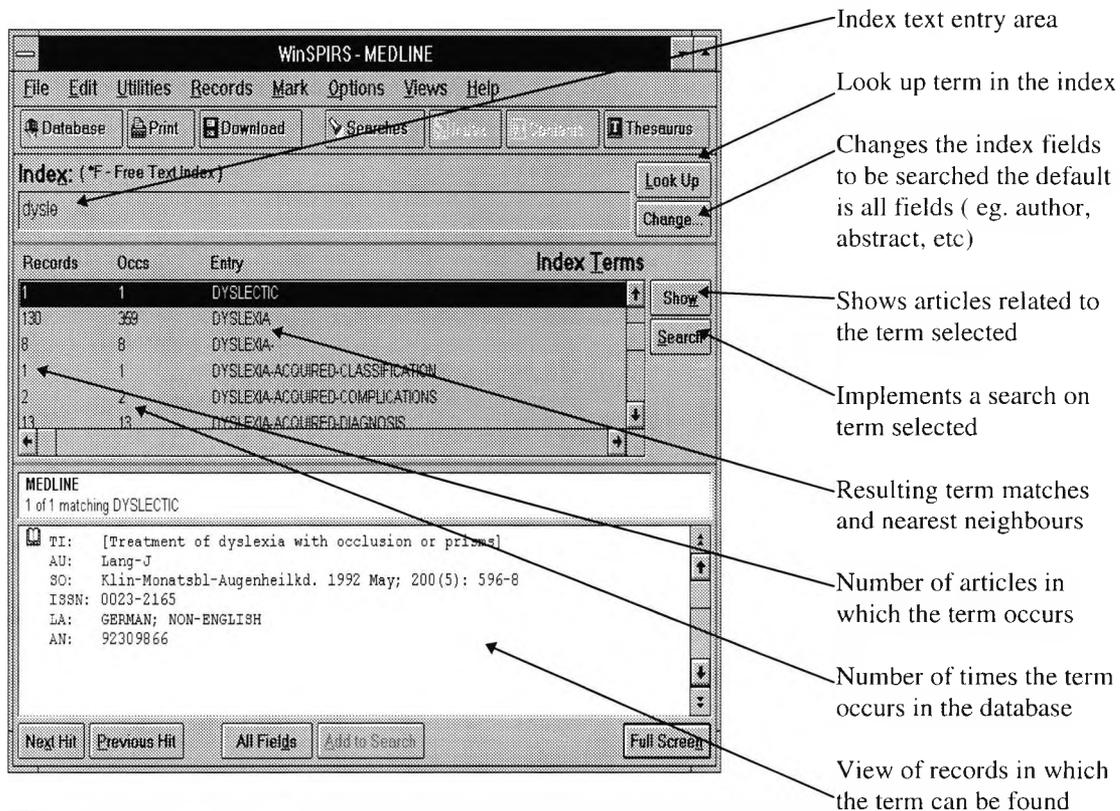

- 1. Click the **Index** button or select **Index** from the **Views** menu in the **Search**, or **Thesaurus** screen
- 2. Type a term in the **Index: text entry area** of the **Index screen** (see figure 2). The alphabetical list of index terms alters to match your term
- 3. Click the **Show** button to display the articles associated with the term highlighted.

N.B. You can look at the articles associated with another index term by clicking on that term and clicking the **Show** button

To use index terms in your search:

- 1. Select one or more terms. To select multiple terms, hold down the [Shift] or [Ctrl] key and click on the desired items.
- 2. Click the **Search** button. The terms appear in the **Search history** area of the **Search screen**. If you have selected multiple terms, the database combines them with the OR operator.

Figure 2 Index screen

Thesaurus: The **Thesaurus** is a list of controlled vocabulary on which the index is standardised. This enables you to select and search for synonyms, related terms, preferred terms and a definition for a

term. The hierarchical nature of the thesaurus allows you to select more general (broader) and more specific (narrower) terms to be used in your search.

To look up a thesaurus term:

1. Click the **Thesaurus** button or select **Thesaurus** from the **Views** menu to enter the **Thesaurus screen** (see figure 3)
2. Type a term in the **Thesaurus: text entry area** and click the **Look Up** button. The permuted index is displayed, with term you typed highlighted
3. If desired, click the **Term Information** button to see details about the term such as definitions, scope notes and broader and narrower terms.

To search for the term:

1. Choose a type of search from the search options area.
 - **Single Term** searches for just the term you have selected
 - **Explode** searches for the selected term, plus all of its narrower terms as included in the **Thesaurus**.
2. Click the **Search Now** or **Add to List** button only for articles containing that term.
 - **Search Now** searches for the term immediately.
 - **Add to List** adds the term to the list to be searched for later. You can then search for several thesaurus terms by clicking the search list button.

6a Pre-test questionnaire Liber/ PTRC

User Name:

Date:

Multimedia Broker Evaluation

Pre-study Questionnaire

Thank you for taking part in this study. We hope you will find today's session interesting. This questionnaire is designed to collect background information about you, the user, to help us interpret the evaluation findings. For each question, circle the appropriate response or write your answer in the space provided.

1. What is your age?

<20 20-29 30-39 40-49 50-59 >60

2. Are you

Male

Female

3. What is your job title? _____

4. Briefly describe your main job activities?

5. What type of computer system do you use?

PC 386

PC486

Pentium

Notebook

Mac II series

Quadra

PowerMac

PowerBook

IBM workstation

Sun workstation

Other

13. How often do you browse for information? (That is, look around for items of interest but without a specific goal in mind).

1	2	3	4	5
Less than once a week	Once a week	Every few days	At least once a day	Several times a day

14. How often do you search for information on a specific topic?

1	2	3	4	5
Less than once a week	Once a week	Every few days	At least once a day	Several times a day

15. What kind of information do you browse or search for?

1. 2. 3. 4.

16. What sorts of problems do you encounter when you browse or search for information?

For each of the statements below, please mark the checkbox which in your opinion most closely matches your degree of agreement with the statement in relation to the information you require.

17. In general would you describe the types of information you require to satisfy your requirements from retrieval systems on the following scales:

Generality:- either high level information (general) or low level detail (specific)

General *specific*

Knownness: how well can you describe the information required

Well known target *unknown target*

Complexity of the problems you try and solve: Complex = many concepts and relationships

Complex *simple*

Type of information required

text *images* *numeric* *multimedia* *unknown*

Number of results required to satisfy your information requirements

1 answer *1-20* *20-50* *50-75* *75-100* *>100*

Expected completeness of the information retrieved

20% *40%* *8-%* *90%* *other.....*

Required completeness of the information required

20% *40%* *8-%* *90%* *other.....*

6b Post test questionnaire Liber

User Name:

Date:

Multimedia Broker Post-study Questionnaire

4. Query Advice Tool

Questions 3-5 are from the System Usability Scale (SUS) which is the work of John Brooke of Digital Equipment Corporation, who retains copyright.

For each of the statements below, please mark the checkbox which in your opinion most closely matches your degree of agreement with the statement.

1. I thought the advice and assistance was represented in a useful and meaningful way.

Strongly Disagree [], Somewhat Disagree [], Neither Agree nor Disagree [], Somewhat Agree [], Strongly Agree []

2. I found the interface tools effective for constructing and refining queries.

Strongly Disagree [], Somewhat Disagree [], Neither Agree nor Disagree [], Somewhat Agree [], Strongly Agree []

3. I found the system unnecessarily complex

Strongly Disagree [], Somewhat Disagree [], Neither Agree nor Disagree [], Somewhat Agree [], Strongly Agree []

4. I thought the system was easy to use

Strongly Disagree [], Somewhat Disagree [], Neither Agree nor Disagree [], Somewhat Agree [], Strongly Agree []

5. I would imagine that most people would learn to use this system

Strongly Disagree [], Somewhat Disagree [], Neither Agree nor Disagree [], Somewhat Agree [], Strongly Agree []

User feedback on Query Advice Tool

Questions for discussion

1. The Thesaurus

1. Please give your feedback - what do you think? Is it helpful to be prompted with synonyms?

2. Results diagnosis

Is the results diagnosis clear and meaningful? Is it clear how to use it?

3. Broadening Advice

Is the broadening advice helpful and useful? Is it clear how the advice affects their queries?

4. Graphical representation

Is the graphical representation meaningful and helpful?

4. Query Advice Tool

Questions 3-5 are from the System Usability Scale (SUS) which is the work of John Brooke of Digital Equipment Corporation, who retains copyright.

For each of the statements below, please mark the checkbox which in your opinion most closely matches your degree of agreement with the statement.

1. I thought the advice and assistance was represented in a useful and meaningful way.

Strongly Disagree [], Somewhat Disagree [], Neither Agree nor Disagree [], Somewhat Agree [], Strongly Agree []

2. I found the interface tools effective for constructing and refining queries.

Strongly Disagree [], Somewhat Disagree [], Neither Agree nor Disagree [], Somewhat Agree [], Strongly Agree []

3. I found the system unnecessarily complex

Strongly Disagree [], Somewhat Disagree [], Neither Agree nor Disagree [], Somewhat Agree [], Strongly Agree []

4. I thought the system was easy to use

Strongly Disagree [], Somewhat Disagree [], Neither Agree nor Disagree [], Somewhat Agree [], Strongly Agree []

5. I would imagine that most people would learn to use this system

Strongly Disagree [], Somewhat Disagree [], Neither Agree nor Disagree [], Somewhat Agree [], Strongly Agree []

6. I thought the system restricted my natural approach to retrieval of information and this made my retrieval less effective

Strongly Disagree [], Somewhat Disagree [], Neither Agree nor Disagree [], Somewhat Agree [], Strongly Agree []

7. I thought the system may improve the effectiveness of my retrieval activity

Strongly Disagree [], Somewhat Disagree [], Neither Agree nor Disagree [], Somewhat Agree [], Strongly Agree []

Glossary

Concept	A concept is a component of the query relating to specific domain area. A concept can be articulated using a number of synonym terms.
Term	Terms are used to articulate concepts within queries. A concept may use one or more terms in its articulation.
Strategy	A strategy is a high level plan of action determining the approach taken to retrieval. Strategies can be sub-strategies e.g. sub-goal and formulate a strategy for each goal.
Tactic	A tactic is a lower level operator than a strategy and allows a query to be amended in a specific search situation.
Information need	A information need is a users requirement for information to allow them to satisfy or solve a problem.
Activities	Activities within the search process are the actions the user performs as part of the different search processes.
Process	Processes are higher level operations describing a class of activities.
Search context/ situation	The context of a search are the characteristics of the situation with which the user is faced.
Information indexing policies	These are the classification and information structuring methods used to represent the information within the database.
IR cycle	An IR cycle is composed of the activities, processes, strategies and tactics required to complete one cycle of the generic process model.
Mental model	This relates to the information and expectations a user has about the device based on experience.
Device knowledge	Consists of knowledge relating to the current IR system, knowledge of IR systems in general and strategic IR knowledge.
Domain knowledge	Domain knowledge constitutes how well the user knows the specific domain of the current information need
Gold standard queries	Gold standard queries are the queries developed by a mediation between a domain expert and a device expert determining how to develop the problem
Gold standard solution set	Gold standard solution set constitutes the set of all articles which are relevant to the information need.
Document description	A document representation are the characteristics and information contained within the retrieval system about each article.
Search options	Search options are the possible courses of action in terms of decisions, strategies and activities in any given situation.
Query level evaluation	These are judgements based on the quantity of results retrieved by the query.
Term level evaluation	These are judgements on the quantity of results retrieved by the different components of the query (term or concept)
Article level	These judgements are based on the quality of the articles
